

VIGILANT'S OFFERING

for Gaming & Casinos

A casino is a unique, dynamic and demanding environment where CCTV – deployed for security and surveillance – is mandatory for its smooth and successful operation

Vigilant™ Technology currently provides solutions to record and monitor thousands of cameras in leading casinos worldwide. With this proven track record, Vigilant has the extensive experience needed to develop and manufacture high-end video systems to match the mission-critical demands of the gaming industry.

Vigilant provides end-to-end IP based solutions including Digital Video Recording (DVR), Network Video Recording (NVR) and intelligent control-center systems, all supported by intelligent video analysis tools. The solutions enable real-time high-resolution recording capabilities, with proactive event management and content analysis tools.

Features and Benefits

- > High Resolution
- > Full Frame Rate (Real Time) Recording
- > Simple Operation and Logical Camera Grouping
- > Reliability
- > Modular and Scalable System Architecture
- > Advanced Streaming Technology
- > Synchronized Video and Audio Playback
- > Unrivaled Cost Performance

Vigilant Technology is your partner for IP Surveillance and Security Solutions in Gaming.

Vigilant Technology understands the exceptional demands of the Gaming industry:

We know that lack of continuous surveillance can result in serious losses – to both casinos and their clientele. Our video streaming technology allows operators to access and view live and stored video immediately from any point on the video stream.

We understand that gaming tables must be monitored constantly to catch quick actions and sleight of hand which may lead to deception. Our high resolution recording system, together with high frame rate, ensures a vigilant eye on all activity, providing high clarity and detail.

We appreciate that operators need immediate access to stored video for instant analysis to ensure the smooth flow of games. Nothing is missed in the recording process. Video can be played back frame-by-frame for quick, detailed analysis. Once investigated, the croupier can continue the games on his tables with minimum disturbance.

VIGILANT'S OFFERING

for Gaming & Casinos

Main Features and Benefits

In casinos, where large amounts of money are at stake, Vigilant has the features to ensure maximum coverage of gaming areas with minimum disruption.

High Resolution

4CIF resolution provides operators with the clarity and detail required to identify face cards and monetary denominations.

Full Frame Rate (Real Time) Recording

25 fps PAL or 30 fps NTSC to ensure that nothing is missed in the recording process. Video can be played back frame by-frame for detailed analysis.

Simple Operation and Logical Camera Grouping via Matrix

Vigilant's GUI (Graphical User Interface) is remarkably simple and allows operators to locate and review cameras quickly. Our logical grouping feature allows operators to identify cameras by group type e.g. Blackjack tables – irrespective of where they may be in the main system. Playback can be controlled by the matrix keyboard(s) and viewed on the matrix monitor(s).

Ease of Installation

The configuration requires less physical space in comparison to analogue VCRs. This in turn makes for an easier installation process especially when dealing with large camera networks.

Reliability

Robust architecture ensures that there is no single point of failure. Our solutions use only server-rated components that are designed to run 24/7. All drives are hot swappable and configured in RAID 5. Mirrored system disks, hot swap power supplies and continuous fault monitoring further contribute to ensuring maximum system uptime.

Modular and Scalable System Architecture

Vigilant solutions are specifically designed to cater to the requirements of large-scale CCTV systems. Hundreds of cameras can record at full-frame rate and full resolution with no limits on expansion. Multiple operators can access and use the system simultaneously without conflict.

Advanced Streaming Technology

Vigilant solutions incorporate video streaming technology, allowing operators to access and view stored video immediately from any point on the video stream with one simple click of the mouse.

Synchronized Video and Audio Playback

Every video channel has an associated audio channel, allowing the added value of audio to be listened to in live or playback. This capability provides more concrete evidence in awkward situations. Operators can synchronize the video and audio playback of up to four cameras simultaneously, to assist in analyzing incidents that may have happened over a number of different cameras at the same time.

Unrivalled Cost Performance

MPEG 4 technology delivers high quality images at lower storage requirements than other compression engines, translating into less cost associated with the storage and archiving of recordings.

About Vigilant

Vigilant Technology is a global leading provider of intelligent IP surveillance and security solutions. The company offers a turn key solution including video servers, DVR/NVRs, intelligent real-time video content analysis and sophisticated, proactive control center solutions. Vigilant has a worldwide customer base and is globally supporting tens of thousands of cameras in airports, governmental sites, financial institutions, correctional facilities, casinos, city centers, and more.
