

Central Bank of Malta **SUCCESS STORY**

The Central Bank of Malta is Fully Satisfied With Vigilant's Surveillance Systems

About the Central Bank of Malta

Ever since its establishment in 1968, the Central Bank of Malta has contributed to the country's financial and economic development, particularly by pursuing policies designed to foster exchange rate and price stability and a sound financial system.

In May 2004 with Malta's accession to the European Union (EU), the Bank became a member of the European System of Central Banks (ESCB). Since then, the Central Bank of Malta has been strengthening both its human resource base and its operational infrastructure in preparation for Malta's forthcoming adoption of the EU's single currency, the Euro, and its own membership of the Euro system.

CENTRAL BANK OF MALTA

The Challenge

As a result of the considerable transformation it has undergone in recent years and in order to fulfill both its domestic and its ESCB-related obligations, the Bank committed itself to adopt the most qualified security and surveillance system to support its current and future physical infrastructure and ensure a congenial and secure working environment to its staff and clientele.

Vigilant Solution

The Bank of Malta has chosen the CCTV solution provided by Vigilant Technology with the full cooperation of the local leading computer and communication provider - Philip Toledo Limited.

James Sciberras, Sales Executive at Philip Toledo Limited, said: "We had handed over the system to the Central Bank of Malta. They were happy with the whole setup, found the Vigilant ViewStation software easy-to-use and they had no complaints. We are also very happy from our side with the help and support provided by Vigilant Technology. I can see how this successful implementation leads our both companies to reach future projects smoothly."

He added: "The De La Rue machine is a complex banknote counting/validating machine that can produce a log with test results of every banknote it verifies. With the help of software integration with our DVR, CBM would be able to have visual evidence if the log reports a counterfeit banknote by going directly to the recorded time frame of the particular banknote".

About Vigilant

Vigilant Technology, a BATM Company, is a global leading provider of intelligent IP surveillance and security solutions. The company offers a turn key solution including video servers, DVR/NVRs, intelligent real-time video content analysis and sophisticated, proactive control center solutions. Vigilant has a worldwide customer base and is globally supporting tens of thousands of cameras in airports, governmental sites, financial institutions, correctional facilities, casinos, city centers, and more.
