

Vigilant is Delivering Security to Russian Bank

Vigilant Technology provided a comprehensive upgrade of the existing CCTV system at the Vnesheconom bank

About the Vnesheconom bank

Vnesheconom bank is one of Russia's oldest banks. The bank is a specialized state financial institution which maintains wide ranging international ties and therefore well known to the world business community. It has gained unique experience in providing financial support for interstate agreements and government programs as well as for large scale projects implemented under interstate agreements.

Part of the State Bank of Russia Vnesheconom bank's top priority task is to render banking support for government and structural reforms, above all, in the economic and social sectors.

The challenge

Vnesheconom bank occupies large prestigious offices in the center of Moscow. Whilst visitors are made welcome, it is considered essential that all the Bank's staff can work in a safe environment and that clients' confidential information remains secure at all times.

The bank therefore wanted to invest in a state of the art CCTV system which would play a major role within the Bank's sophisticated security arrangements. In particular the bank wanted to be able to record in real time images captured by 480 cameras located around the building and at the same time allow both live and pre-recorded images to be viewed from a number of different locations.

Vigilant Solution

ATEX, a system integrator based in Moscow, worked closely with the bank to assist their technical staff to test a variety of potential solutions from different manufacturers. A Vigilant Technology digital video management system was subsequently chosen as it offered the best option for the bank to achieve its prime objectives and much more.

Elie Maoz, Sales Director of Vigilant Technology said: **"We were able to design and supply the bank with a system that provides the ability to record high resolution images from all of the 480 cameras at 25 frames per second. At the same time, images from 40 of the cameras are constantly analyzed by our SmartGuard system. This very clever system analyses the images in real time, looking for patterns of behavior. It brings to the operator's attention anything unusual which should be looked at, thus improving the safety and security on site and providing managers with improved decision making tools."**

The video from the various cameras can be viewed from a number of different control rooms from within the bank. In each location, Vigilant have provided its NetView digital matrix and management system which allows operators to intelligently monitor and manage security at the site.

About Vigilant

Vigilant Technology, a BATM Company, is a global leading provider of intelligent IP surveillance and security solutions. The company offers a turn key solution including video servers, DVR/NVRs, intelligent real-time video content analysis and sophisticated, proactive control center solutions. Vigilant has a worldwide customer base and is globally supporting tens of thousands of cameras in airports, governmental sites, financial institutions, correctional facilities, casinos, city centers, and more.
