

## Vigilant provides surveillance to White Sands Missile Range

### About White Sands Missile Range

White Sands Missile Range is a United States Army facility of almost 3,200 square miles (8,300 km<sup>2</sup>) in parts of five counties in southern New Mexico near Alamogordo. As the largest military installation in the United States, White Sands Missile Range (WSMR) provides the Army, Navy, Air Force, Department of Defense, and other customers with high quality resources for scientific experimentation, test, research, assessment, development, and training. Current operations include ground support for the Tracking and Data Relay Satellite (TDRS), a network of communications satellites, as well as a variety of government and private research projects, missile testing and recovery operations.

### The Challenge

WSMR is located in the Tularosa Basin, a valley between the Organ Mountains, San Andres Mountains and the Sacramento Mountains. It is named for the white gypsum crystals that leached out of surrounding mountains. These sand dunes extend from WSMR, through White Sands National Monument, and into nearby Holloman Air Force Base.

The challenge of providing military grade perimeter protection over such a large, diverse terrain fell to the integration services of SD Technologies based in El Paso, Texas. SD Technologies looked to Vigilant Technology to provide the latest in IP video management systems to protect government assets and ensure life safety.

### The Solution —Robust Virtual Matrix to Maximize Perimeter Protection

“With many years of reliability and innovation, Vigilant was considered as the most network-centric solution,” explained Donald Davis, Project Manager for SD Technologies. “Vigilant’s Netview virtual matrix enables higher situational awareness among operators by displaying a wide range of information using an easy to view interface. This allows greater mission effectiveness with a more proactive focus on perimeter protection.”

### About Vigilant

Vigilant Technology is a pioneering developer and manufacturer of intelligent video recording and surveillance solutions for mission-critical applications. The focus is on adding value to the video that is captured by customers’ CCTV networks. Vigilant’s high frame rate solutions allow customers to break free from ineffective time-lapse recording solutions. They enable demanding environments to gain maximum benefit from today’s digital video recording technology.
